Dear Ms. Priolo:

Since January 2003 when California Vehicle Code Section 22112 (school bus signal and school bus stops) was revised, we have seen an alarming increase of "red light" runners at our school bus stops. Because of this, we have given serious attention examining ways of reducing red light runners.

As you are aware, the Clovis Unified School District has had incredible success with the installation of your product line, the **G2 Fussion LED Warning Light System**. We have outfitted 31 of 88 school buses thus far. We continue to conduct in-house surveys of "red light runners" throughout the 198 square miles of our school district. These surveys substantiate that school buses outfitted with the CRS Electronics G2 Fussion LED Warning Light System have an amazing reduction of up to 90% "red light runners" compared to the older incandescent systems. Our bus drivers even make specific request to operate buses outfitted with G2 systems.

This is testimony that your typical motorist just is not connecting with the "normal" school bus warning lights systems. Once the warning light system is upgraded to your G2 FUSSION LED Warning System, the motorist awareness is increased and the motorist is responding to the flashing lights by stopping. The strobing LED technology provides a light system that reduces red light runners. Without a doubt, the G2 system provides our students an increased level of safety while loading or unloading at our bus stops. Even during these difficult budget times, we plan to continue to retrofit the remaining bus fleet with G2 Fussion LED Warning Systems as well as specifying the G2 System on all of our new bus orders.

Please do not hesitate to contact me with any questions you may have at 559-327-9671.

Sincerely,

A handwritten signature in blue ink that reads "Joseph K. Bjerke". The signature is fluid and cursive, written over the printed name.
